Healthcare

Headquarters:
Germany / Achenmühle

- Solutions:**
- MTD [log] with Microsoft Sentinel
 - SOC-Services
 - Consulting

Customer profile

Medi-Globe is a group of internationally active companies specializing in gastroenterology, urology and pneumology. Their portfolio includes technological medical products developed primarily for application in hospitals, but also for external patient care and the homecare segment. The group's headquarters are in Rohrdorf-Achenmühle in Bavaria/Germany.

The situation

Conscious of the need to protect against the risk of potential cyber attacks as good as possible, the company decided to get an insurance that would cover potential damage. To utilize the insurance a number of prerequisites were to be fulfilled.

One of them was that Medi-Globe would either have to set up and operate its own CyberSOC or commission that responsibility to a reliable partner providing SOC services.

Medi-Globe already owned Microsoft Sentinel licenses and thus the company decided to look for a partner who could integrate Sentinel in their CSOC technology stack and can generally provide in-depth experience in dealing with Microsoft products.

Solution

After a careful evaluation, Medi-Globe chose Orange Cyberdefense as their partner. The comprehensive, proven know-how in Microsoft solutions and the excellent CSOC services convinced the medical technology specialists that this was the right partner.

In addition, Orange Cyberdefense was able to provide profound experience in the field of consulting and cybersecurity strategy. They advised Medi-Globe in depth and made recommendations for improvements to the Microsoft instance, which helped to optimize the setup and achieve the best possible performance in terms of cyber security.

Benefits

Medi-Globe has now found a reliable partner who operates Microsoft Sentinel in its CSOC and at the same time has in-depth knowledge of Microsoft products. This was a requirement for working with the cyber insurance. Medi-Globe also benefits from the extensive experience of a CyberSOC team specializing in this solution.

An additional benefit were experienced consultants who have provided improvements to the Microsoft instance and supported during the onboarding process. With the help of Managed Threat Detection [log] for Microsoft Sentinel, data can now be collected from various sources and the most likely threats can be identified using expert data analysis. This saves time and resources.

What the customer says:

» We chose Orange Cyberdefense as our partner because they convinced us with their extensive experience in Microsoft products and excellent CSOC services. We are confident that together we will be able to protect our critical IT systems and ensure the highest possible security for our company. «

Christian Czech, Global Head of IT at Medi-Globe

Services provided:

- Consulting
- Managed Threat Detection [log]
