Security Maturity Assessment

By understanding where you are today, you can build an effective, long-term cyber security strategy for the future!

The Security Maturity Assessment (SMA) offers the perfect entrypoint for establishing a strategic Cyber Defense environment for your business.

Today, the need for organisations to be cyber secure goes without saying. Often, however, organisations rely on an ad hoc approach to security. By implementing many and various solutions, they hope to maximise their effectiveness. Such an approach is likely to lead to insufficient security at high cost.

Our methodology is different. By providing a structured approach, based on expert analysis of your operation and its context, we provide a clear and accurate assessment of where you are now, allowing you to build a highly effective cyber security strategy for the future.

Our Security Maturity Assessment (SMA) is a proven first step in helping you understand where you stand in the spectrum of security maturity and provides the perfect platform for building a long-term strategy of effective cyber protection.

What the SMA gives you:

After we've carried out a full maturity assessment of your organisation, you'll have:

- An organisation-wide security maturity score, that indicates how fit-for-purpose your cyber defences are.

- A clear breakdown of your score across business functions (people, process, technology) and security areas (prevention, detection, response).

- An understanding of how your maturity score compares with that of competitors in your industry.

- A set of actionable recommendations and clear priorities on how to increase your organisation's security maturity.

- An executive summary and report for your leadership team, allowing them to make better-informed project and investment decisions.

- Optional: Ongoing access to the Orange Cyberdefense online assessment portal, allowing you to continually improve your security maturity score over time.

- Optional: Access to the Orange Cyberdefense Cyber Security Advisory Services team as you implement recommendations.

Benefits:

- Provides you with a clear picture of the current status of your security maturity, based on facts and expert opinion

- Our expert recommendations allow you to build truly effective cyber defences and controls quickly and costeffectively

- Provides a firm basis for defining goals and planning an enhanced and future-proof cybersecurity strategy

- Get objective third-party evidence of how your improvements provide better security

How the SMA works

Our SMA has been developed from over 15 years' experience in designing, delivering and supporting security solutions to major organisations across the globe. We understand the current and emerging cyber security landscape as well as anyone in the world.

A unique blend of a powerful technology platform, and consulting expertise, the SMA is a thorough assessment of your capabilities, adaptive to any organisation size or industry.

1 A lead consultant from our Cyber Security Advisory Services Team will take you through your assessment process. The assessment itself takes the form of an interview based workshop with stake-holders.

2 Orange Cyberdefense will carry out an internal review & QA of your results. These will be evaluated within the assessment platform to generate the report.

Need more info?

If you'd like to know more about how the SMA can help your organisation, simply call us to arrange a free, no obligation consultation, or visit **https://orangecyberdefense.com**

For more context and insight into how you compare to other organisations in your industry and others take a look at the Security Maturity Insight Report.

3 You will get an executive report and summary of results. Your overall scores as well as recommendations for improvement will be provided. Optionally you will receive ongoing access to the Orange Cyberdefense online assessment platform.
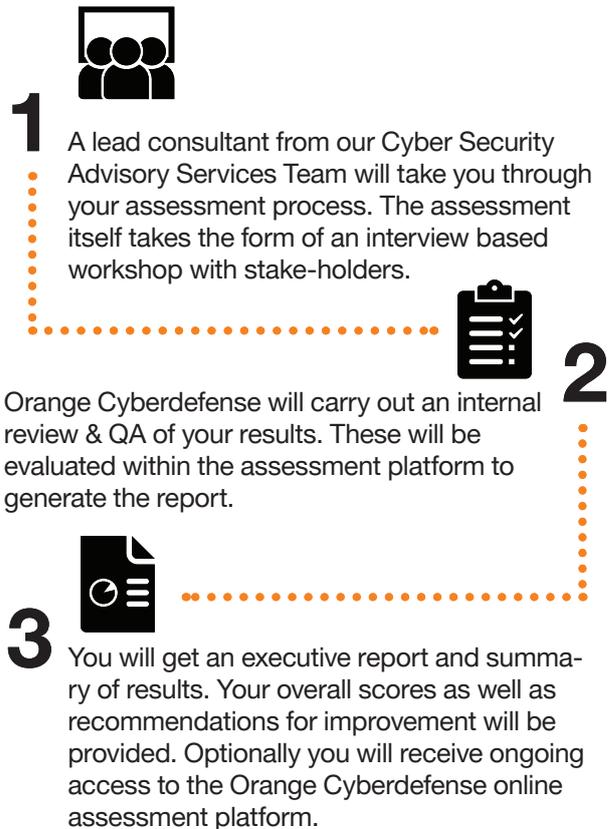

Hello **Collin Montgomerie**,
ACME Corporation **security maturity score** is

39%
