

Professional Services Plan. Deploy. Optimize.

Orange Cyberdefense is your partner in getting security right: our Professional Services provide seasoned security experts, technology specialists, and experienced project managers.

We help you analyze your status, define goals and assist in realizing them in the most efficient way. We help you build and design future plans, lead or staff your security and networking projects, and work with you to ensure operational success.

The Orange Cyberdefense service delivery leverages a combination of best practices, compliance and security frameworks and industry standards, to ensure you get the greatest value from your investments in advanced technology.

We help you take your security to the next level: with unrivaled expertise in combining and implementing the best solutions you need to reach your goals.

With a broad array of services, we take the complexity out of security, so that you can focus on enabling your business.

A trusted advisor you can rely on

With Orange Cyberdefense Professional Services by your side, we will help you:

- Develop security plans to protect your data and assets, in alignment with business requirements.
- Understand what vulnerabilities and threats you need to manage, to avoid potential risks.
- Design technical security solutions that match your needs and integrate with your existing IT infrastructure.
- Implement controls to help maintain compliance.
- Optimize your resource utilization and obtain a relevant level of security for your business.
- Detect, identify and respond to security incidents.
- Operate and maintain your security technology.
- Get the best level of security from your budget.

“You notice that the Orange Cyberdefense engineers also work in the field. The advice comes from their experience and knowledge.”

Wilfred de Groot
System Administrator / HOYER Group

Find out more on how to protect your endpoints on:

Advise & Architect

Design and architect the security strategy that fits your business needs with our experts

Design & Implement

Investigate your current set-up: pen-testing, vulnerability scanning and security assessments

Operate & Support

Prevent threats pro-actively: endpoint defense, firewalling, vulnerability and patch management

Detect & Respond

Find sophisticated intruders in your network with professional threat hunting, SIEM, IDS

Services along the entire lifecycle

Security is a continuous process. It evolves around the lifecycle of Insight, Prevent, Detect and Respond. Customers need to have sufficient skills and resources available in all phases, to ensure appropriate security levels are designed, implemented, maintained and refined.

Orange Cyberdefense offers market-leading services in all of these phases. Our Professional Services organization works close with customers, providing expert guidance applied in the customer-specific environment. Our five Cyber Defense Centers provide 24x7 monitoring, analysis and response for security incidents.

Our technology experts in our Network Operation Centers provide support and maintenance for technology implementations, reducing unwanted downtime and optimizing configurations. Architecture, design, implementation and operation – Orange Cyberdefense is with you every step of the way.

People, process, technology: not a cliché, but truth

Any security program needs proper planning and direction. It needs the technology and processes to provide the desired functions. And above all, it requires people to make it all work, to make the correct decisions, and to take action. Without secured access to resources, organizations risk inefficient use of technology, delayed projects and activities, and insufficient management of security incidents. Working with a trusted partner in cybersecurity, building long-term relationships and clear responsibilities give the organization the confidence needed.

Expertise in abundance

Orange Cyberdefense employs over 700 cybersecurity professionals, ranging from strategic advisors to the expert gurus. Our security analysts are up to date on the latest security threats and trends. Our advisors understand how to apply security in the context of business opportunities, compliance requirements, and risk appetite.
